

Beyond the Beyond

beyond the beyond
beyond the beyond

on a tiny planet, mostly water
moving very close to Mars
life seeks its last chance for survival
with a journey to the stars

beyond the beyond
beyond the beyond

when all is lost for life in this world
all that remains are starward dreams
a second chance at living forward
beyond this planetary stream

where forms of carbon needing water
and air provided by the trees
where daylight follows every nighttime
and life is present in the breeze

beyond the beyond
beyond the beyond

a tiny planet, mostly water
appears beyond a warming star
a second chance for survival
for future flyers from afar

beyond the beyond
beyond the beyond
